GHG Emission Report, v1.0

1.21.4

Instructions

This template is intended for reporting greenhouse gas emissions results to ASC. The Feed Standard does not prescribe a specific standard or set of methods for generating GHG values. However, suppliers should be aware that the development of the Farm Standard requirements may necessitate the application of specific methods for feed emissions in the future.

Emissions can be reported in either or both columns using a biophysical or economic allocation approach. Emissions results must be provided according to scope (1-3) as well as by input/activity, being general feed ingredient categories and additional transport and milling emissions that aren't otherwise captured within ingredients. 'Transport and milling' emissions should be at least equal to the sum of scope 1 and scope 2 emissions. If possible, emissions should also be broken down by category (fossil, biogenic, or land use change), facilitated by certain databases and assessment methods. Any uncategorized emissions should be reported as 'Unspecified emissions' (If feed suppliers are unable to determine emissions by category, the total of all emissions can be reported as unspecified).

This template is also expected to reflect the resolution of data that feed suppliers will need to provide to farms to satisfy feed-related emissions modeling for the Farm Standard. Feed suppliers should be ready to adjust the composition of ingredients used in calculations to reflect typical compositions of feeds relevant to each producer, whether that is on a producer-level or a general species-level (e.g. average ASC-compliant salmon feed composition), so that relevant emissions estimates are available to aquaculture producers for their own calculations.

Only enter data in blue cells.

Table 1. Production year

Year of production (yyyy)

2024

Table 2. GHG emissions by scope

Emissions scope

GHG emissions per tonne of ASC compliant feed (kg CO₂-eq/t)

	Biophysical (mass) model	Economic model
Scope 1	46	46
Scope 2	13	13
Scope 3		
Total	59	59

Table 3. GHG emissions by category

Emissions category

	Biophysical (mass) model	Economic model
Fossil emissions	46	46
Biogenic emissions		
Land use change emissions		
Unspecified emissions		
Total	46	46

Table 4. GHG emission by Input / Activity

Input / Activity

Quantity (kg/t)	Biophysical (mass) model	Economic model
Soy crop inputs		
Other crop inputs		
Reduction fishery inputs		
Fishery by-product inputs		
Poultry / livestock inputs	0	
Other feed inputs		
Transport and milling		
Total	0	0

Notes

All emissions values must be reported in units of kg CO₂-equivalent per tonne of ASC compliant feed.

Emissions totals for each section should be equivalent.

Total feed input quantity (kg/t) must equal 1000. Use 'Other feed inputs' to make up any difference from 1000 kg. 'Other feed inputs' should also include vitamins, amino acids, and other

Transport-related emissions may be difficult to separate from ingredient production and processing emissions, depending on the data source used. Do not include any transport emissions in 'Transport

Ingredient	Raw Material	Origin
Fish Meal	Whole Fish	Ecuador
Fish Meal	Whole Fish	Perú
Byproduct Fish Meal	Whole Fish	Ecuador
Fish Oil	Aquaculture Fish	Chile
Soy Meal	Soy	Bolivia
Soy Meal	Soy	Paraguay
Soy Oil	Soy	Ecuador
Soy Lecithin	Soy	United States
Soy Lecithin	Soy	Argentina
Soy Lecithin	Soy	Brasil
Soy Lecithin	Soy	United States
Soy Lecithin	Soy	Germany
Soy Lecithin	Soy	Costa Rica
Wheat	Wheat	Canada
Terrestrial Meal	Pork	United States

Report title Due Diligence Pathways and Low Risk Plant Ingredients Report, v1.0
Indicators 2.2.10 and 5.1.12

Instructions This template is intended for reporting both a) outcomes of the Due Diligences carried out under Principle 2 and the respective pathways to ASC, and b) an overview of plant ingredients determined to be low risk under Principle 5 and the respective pathways chosen. Reporting is at a UoC level and on an annual basis.

The UoC should select the type of assessment (whether ingredient manufacturer or plant/marine primary raw material), noting that 'plant primary raw material 5.1.5' refers to the additional due diligence assessment required under Principle 5 for legal deforestation/conversion.

The UoC enters the date the assessment was conducted.

The UoC selects the primary raw material assessed (if applicable). If primary raw material is not used, the UoC enters the common name and latin name.

The UoC selects the country of location (ingredient manufacturer) or production (plant primary raw material). For marine primary raw material, the country of the flag state is used (as per pathway 1 Country Score Card), unless pathway 2/3/4 are chosen in which case 'Fishery' is selected as the Country of location.

The UoC selects which pathway was chosen to demonstrate low risk for each risk factor (legal, social and environmental). For plant primary raw material 5.1.5 assessments, only the environmental risk factor applies.

A new row should be added for each assessment.

Only enter data in the blue cells.

Table 1. Total number of assessments

Type of Assessment	Pathway 1	Pathway 2	Pathway 3	Pathway 4	Total
Ingredient Manufacturer (2.2.5)	12	0	0	39	51
Marine Primary Raw Material (5.1.5)	0	0	0	0	0
Plant Primary Raw Material (5.1.5)	0	0	0	0	0

Table 2. Outcomes due diligence pathways and low risk plant ingredients report

Type of Assessment	Date of Due Diligence Assessment (yyyy-mm-dd)	Primary Raw Material "common name (latin name)"	Country of location/production (select 'Fishery' if not using Pathway 1 for Marine)	Pathway chosen to demonstrate Low Risk for Legal risk	Pathway chosen to demonstrate Low Risk for Social risk	Pathway chosen to demonstrate Low Risk for Environmental risk

Report title Volume of Marine Ingredients and MSL Report, v1.0

Indicators 4.1.5 and 4.1.6

Instructions This template is intended for reporting UoC volume of marine ingredients used and majority sustainability level (MSL) to ASC.
For initial audits, the calculation period is the 24 months prior to the initial audit. After initial certification, the calculation period is per calendar year (January to December).

Indicate the volume of whole fish and by-products in metric tonnes, used in aquafeed.

Indicate the volume of whole fish scoring at each category in aquafeed. Note that there may be whole-fish which does not score at any Category.

The MSL is then calculated.

Only enter data in blue cells.

Table 1. Volume of whole fish, by-products and whole fish by category

	Volume (metric tonnes)
All marine	32960
By-products	3.233
Whole fish	29.727
Category 1	13161
Category 2	16566
Category 3	0
Category 4	

Provide the volume of fishery by-products in aquafeed (metric tonne)

Provide the volume of whole fish in aquafeed (metric tonne)

Provide the volume of Category 1 whole fish included in aquafeed (metric tonne)

Provide the volume of Category 2 whole fish included in aquafeed (metric tonne)

Provide the volume of Category 3 whole fish included in aquafeed (metric tonne)

Provide the volume of Category 4 whole fish included in aquafeed (metric tonne)

Table 2. Percentage of whole fish marine ingredients per category

Category	Percentage (%)
Category 1	44
Category 2	56
Category 3	0
Category 4	0

This is the percentage of whole fish marine ingredients in Category 1

This is the percentage of whole fish marine ingredients in Category 2

This is the percentage of whole fish marine ingredients in Category 3

This is the percentage of whole fish marine ingredients in Category 4

Majority Sust Level 2
